

Your machine identities outnumber your people. Nobody owns them.

Acrivault finds every non-human identity in your cloud estate, shows you which ones matter, and lets your team rotate or quarantine them with a human approving every change. Built for the 100 to 1,000 person company, at a mid-market price.

80:1

machine identities per human user in the average enterprise

71%

of organizations suffered an identity-related breach this year

97%

of non-human identities are over-privileged

LIVE TODAY

Ready on day one

CONNECT	Read-only onboarding with SSO, connector inventory
SEE	Posture dashboard, orphaned and dormant identity detection
UNDERSTAND	Blast radius, Behavioral Passport for every identity and AI agent
ACT	Credential rotation with rollback, quarantine with an approval workflow

BUILDING WITH YOU

Your feedback sets the order

COVERAGE	Entra ID and GitHub connectors, activity collection, AI BOM
BEHAVIOR	Baselines, real-time anomaly detection, intent deviation
RISK	Explainable risk scoring, risk in dollars
RESPOND	Quarantine for AI agents and OAuth tokens, containment orchestration
PROVE	Audit logs, SOC 2 and HITRUST evidence export

Agentless

Nothing installed in your execution path

Human-approved

Every rotation and quarantine needs a person

Never over-claims

Each action logged as enforced, held or observed

Least privilege

Access set by role, from Owner to Auditor

WHAT YOU GET

- + Pricing locked for [X years] at [X% below list]
- + Full platform access, free for the [N]-month program
- + A direct line to the founders, replies within one business day
- + A vote on what ships next, and every release before GA

WHAT WE ASK

- Access to one cloud environment and a named owner on your side
- A 30-minute feedback call every two weeks
- Straight answers when something doesn't work
- Optional logo and case study, only if the results earn it

We're taking **[5]** design partners.

100 to 1,000+ people, production workloads in [AWS, Azure or GCP]. SOC 2 Type 2 audit underway.
